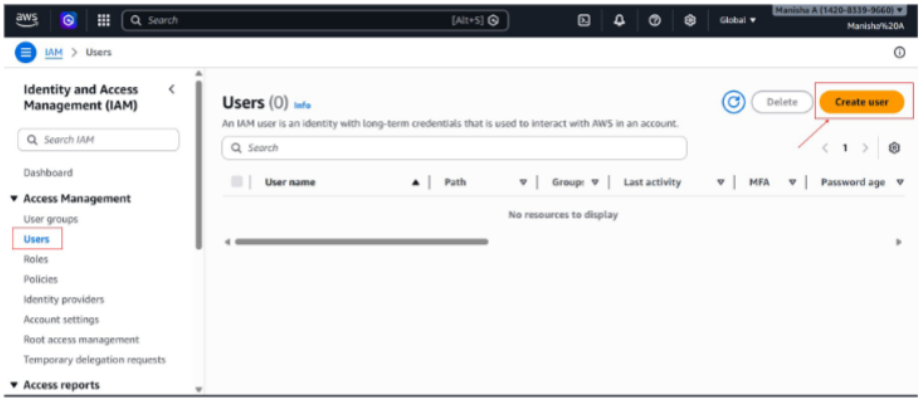
AWS-IAM

1. **Create one IAM user and assign EC2 and S3 full access roles.**

- First I have Navigated to IAM service, then clicked on users to create an user
- Enter usernamr



- I have enabled AWS Management Console access

Review and create
Step 4
Retrieve password
Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.
Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.
Permissions policies (1/1484)
Choose one or more policies to attach to your new user.

IAM > Users > Create user

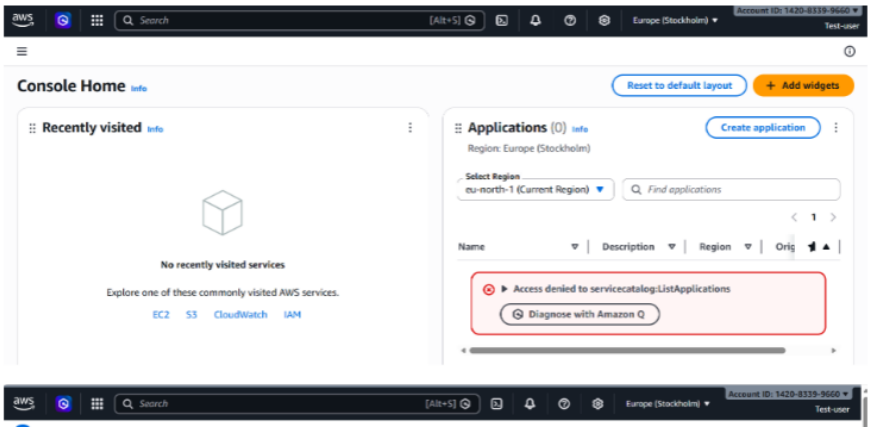
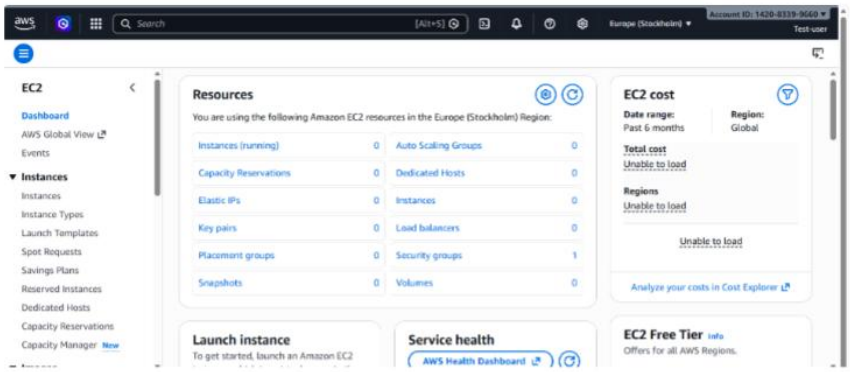
I have loginned to IAM user

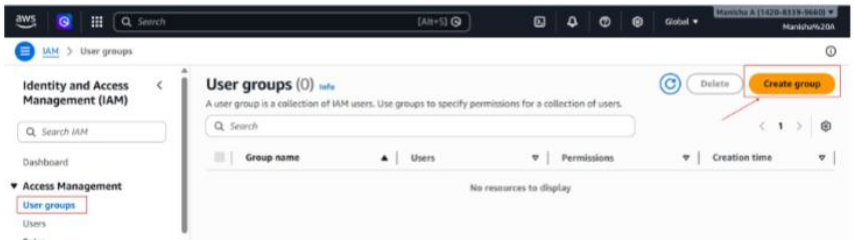


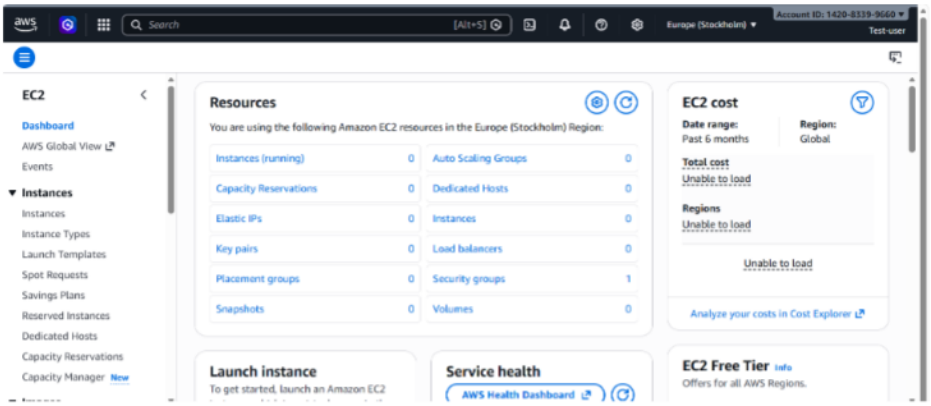


2.Create one group in IAM and assign read access for EC2.

Create IAM Group

- In IAM Dashboard → Click User Groups
- Click Create group
- Enter group name

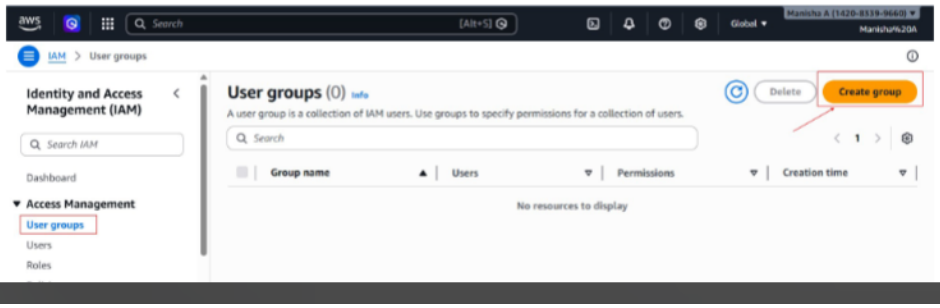


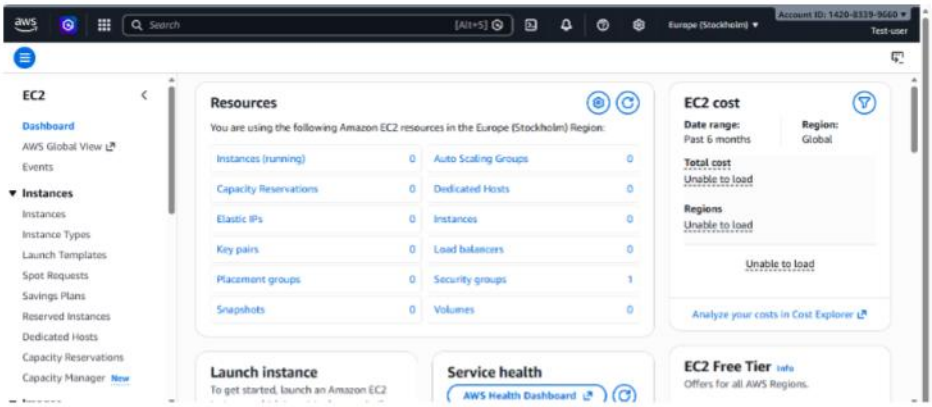


2.Create one group in IAM and assign read access for EC2.

Create IAM Group

- In IAM Dashboard → Click User Groups
- Click Create group
- Enter group name

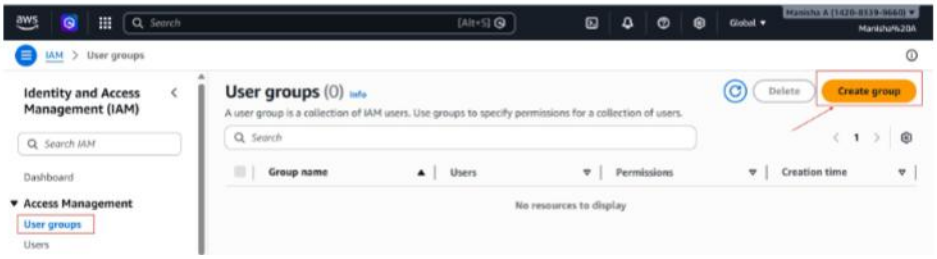




2.Create one group in IAM and assign read access for EC2.

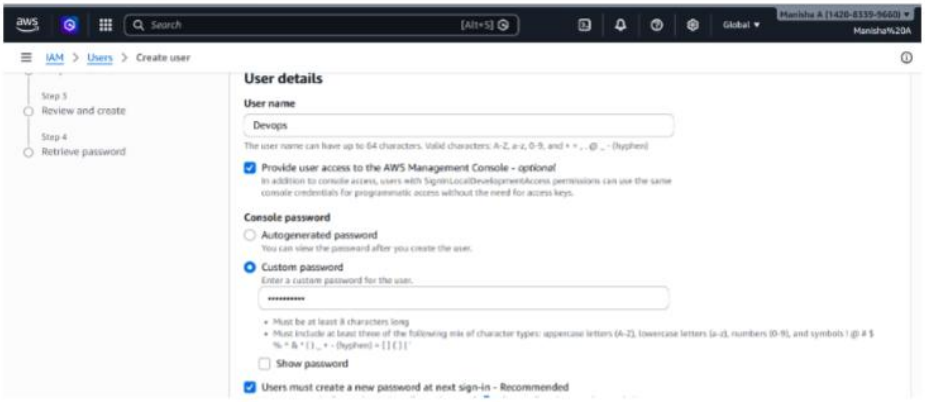
Create IAM Group

- In IAM Dashboard → Click User Groups
- Click Create group
- Enter group name

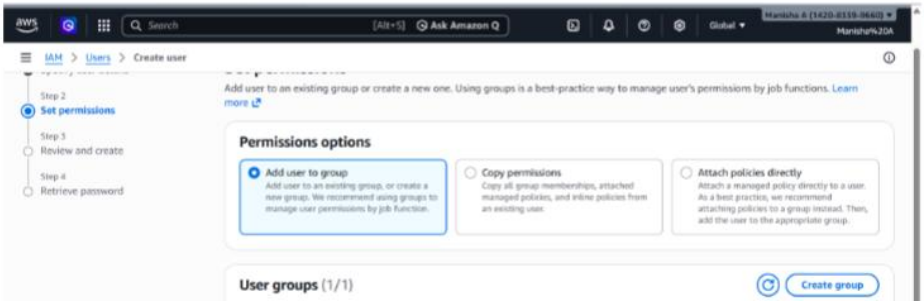


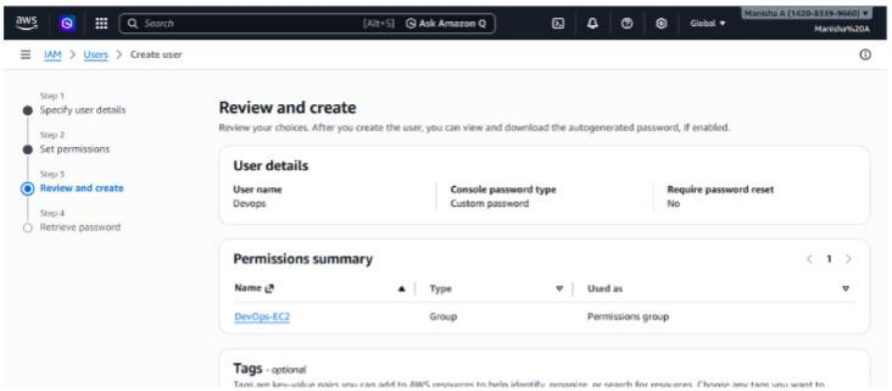
Select Access Type:

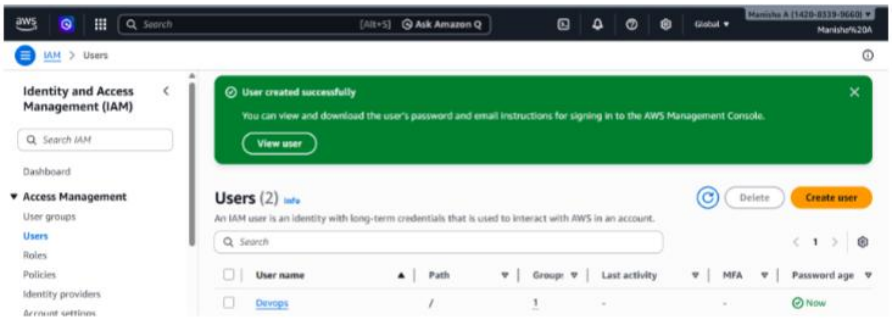
- Enable AWS Management Console access (for login)
- Click Next



Here I am adding user to the existing group







4.Write a bash script to create an IAM user with VPC full access.

I have created a file and wrote a bash script to create an IAM user with VPC full access

Allowed permissions to execute

Chmod +x

```
MINGW64:/c/Users/manis/Downloads

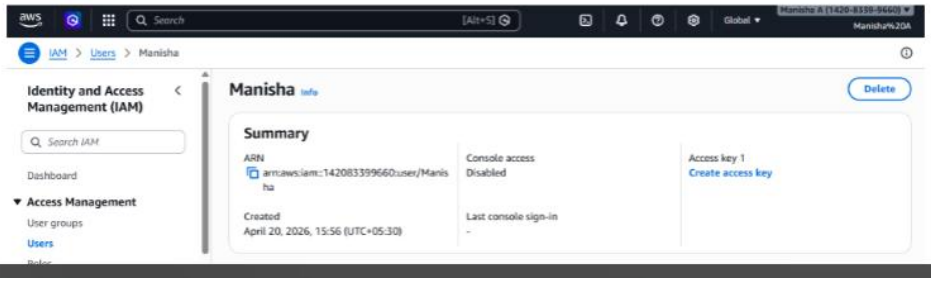
manis@MANISHAREDDY MINGW64 ~/Downloads
$ vi test

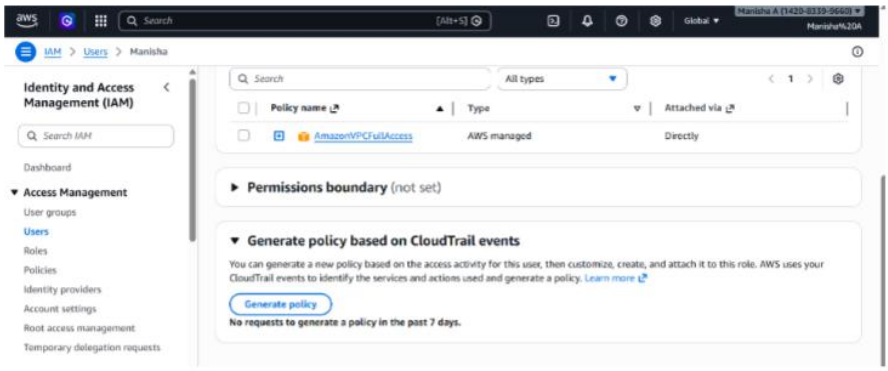
manis@MANISHAREDDY MINGW64 ~/Downloads
$ chmod +x test

manis@MANISHAREDDY MINGW64 ~/Downloads
$ ./test
{
    "User": {
        "Path": "/",
        "UserName": "Manisha",
        "UserId": "AIDASCFGUT7WMYQYILFL4",
        "Arn": "arn:aws:iam::142083399660:user/Manisha",
        "CreateDate": "2026-04-20T10:26:06+00:00"
    }
}
User created and VPC Full Access assigned

manis@MANISHAREDDY MINGW64 ~/Downloads
$
```

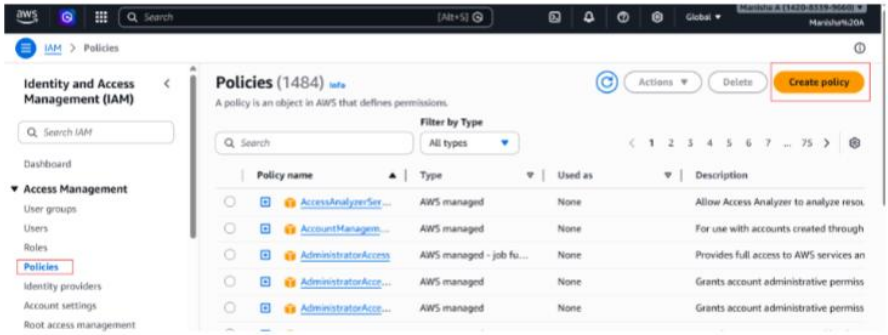
- Checked whether the user is created or not



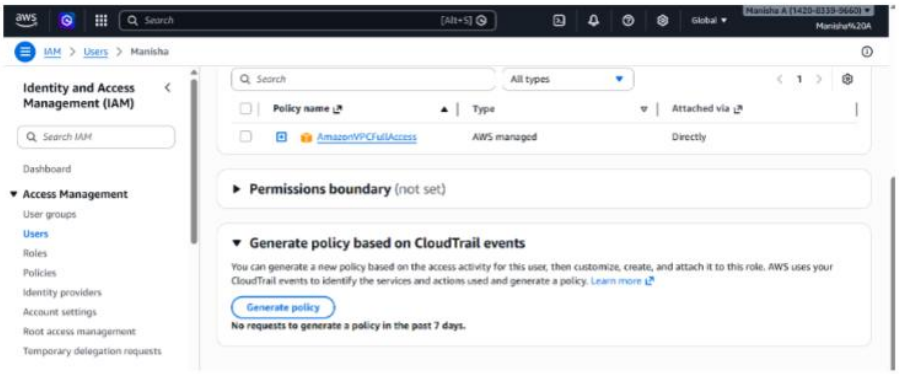


5. Create an IAM policy to allow EC2 access for a specific user in specific regions only.

First I have created policy

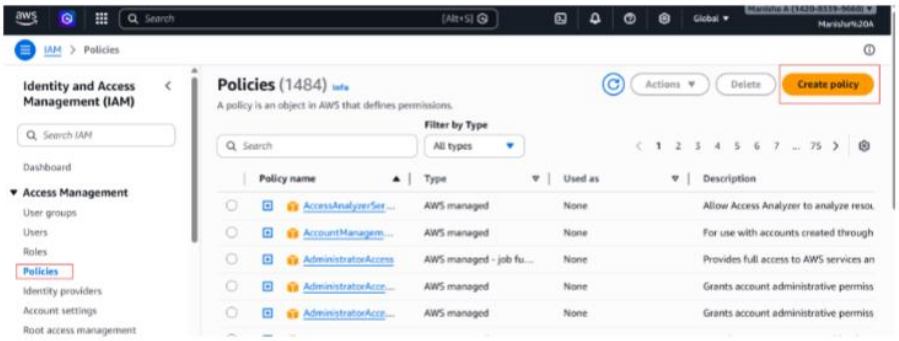


I have added json policy

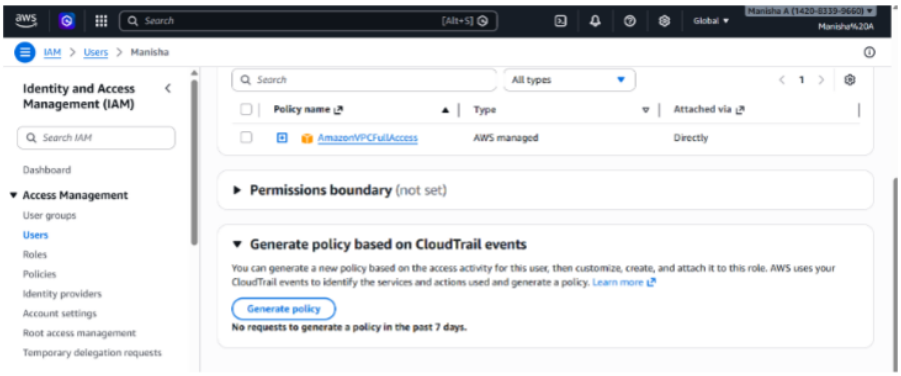


5. Create an IAM policy to allow EC2 access for a specific user in specific regions only.

First I have created policy

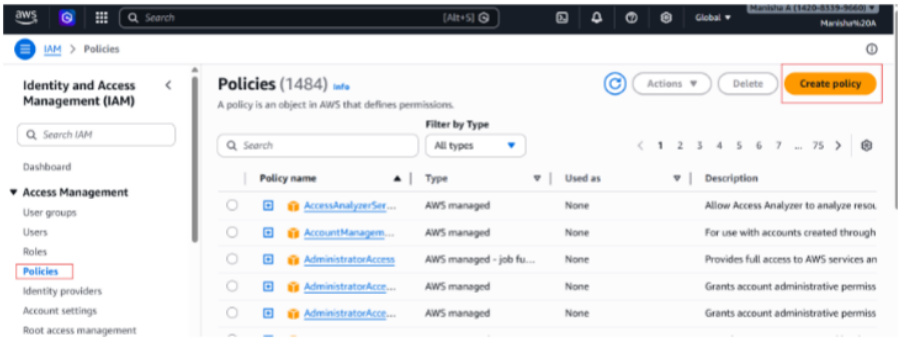


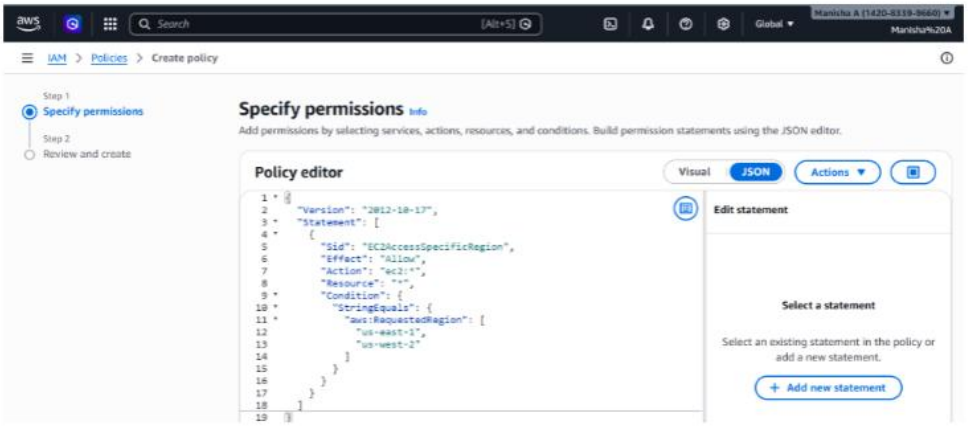
I have added json policy



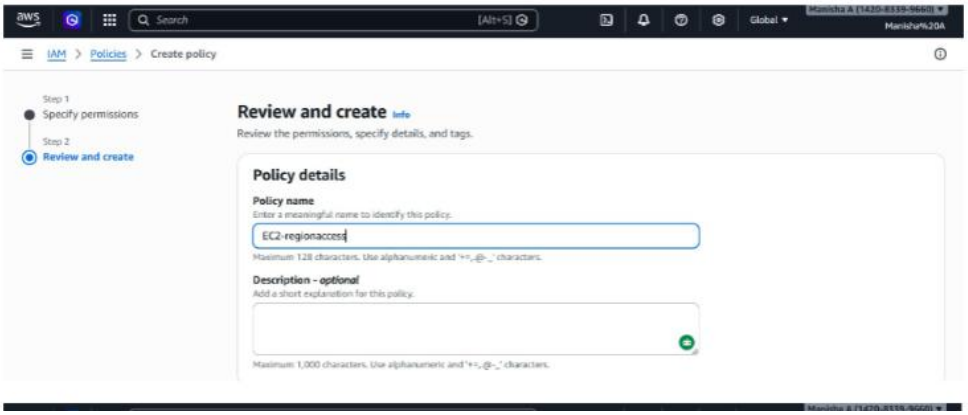
5. Create an IAM policy to allow EC2 access for a specific user in specific regions only.

First I have created policy

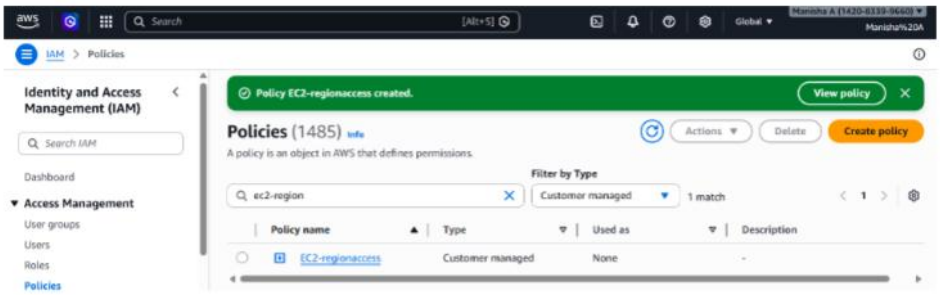




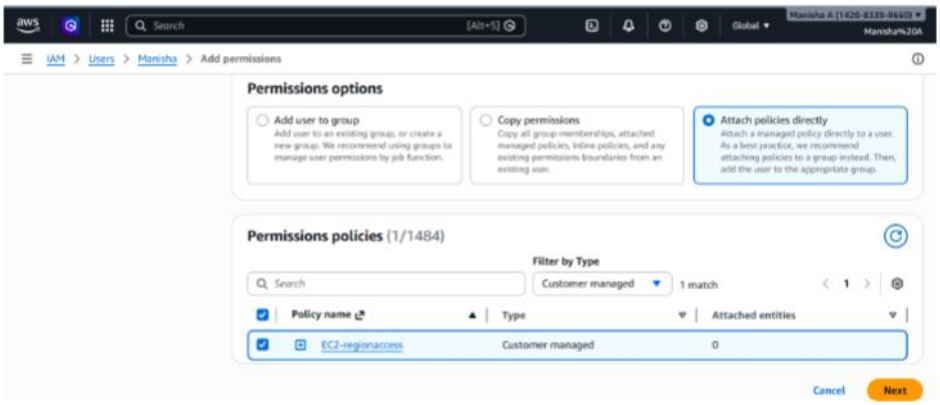
Here I have added a policy name



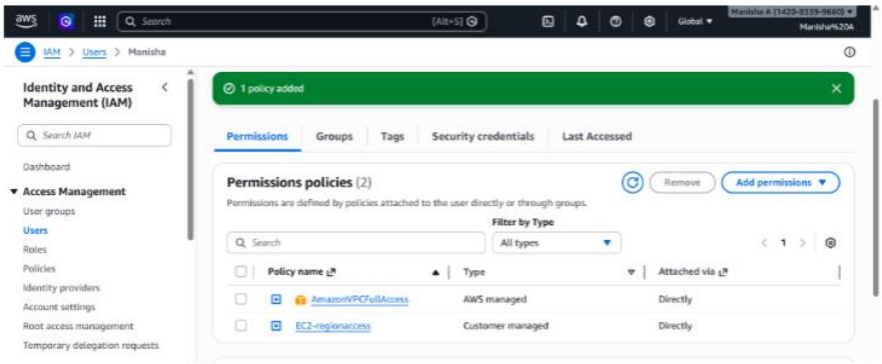
- verified policy



-Added policy to the user I have created

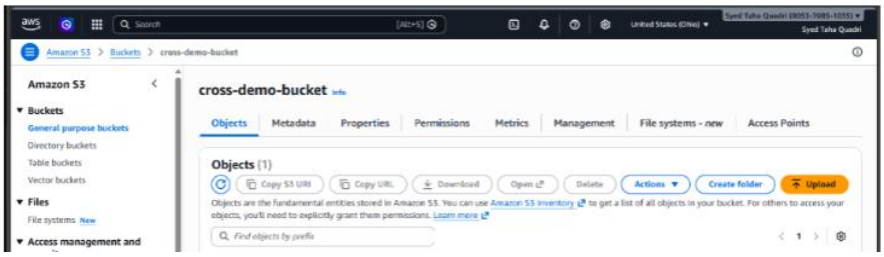


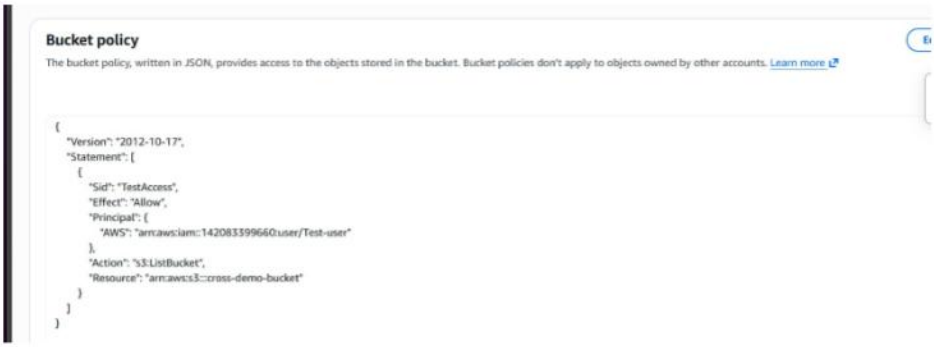
-Checked the policies to verify



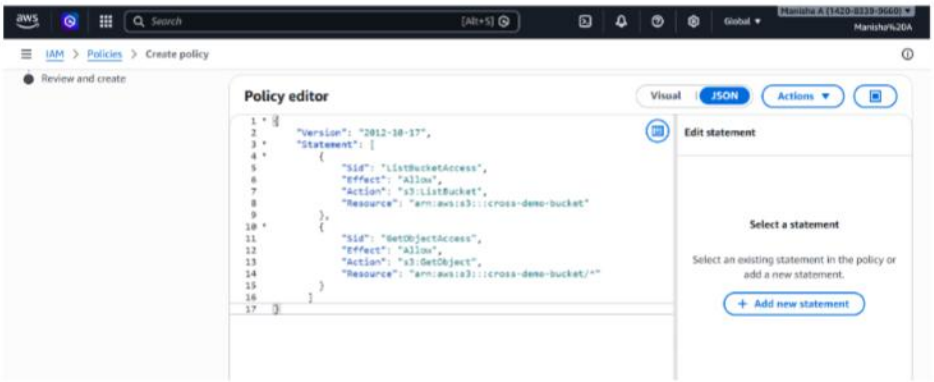
6. We have two accounts: Account A and Account B. Account A user should access an S3 bucket in Account B.

- I am trying to access below bucket



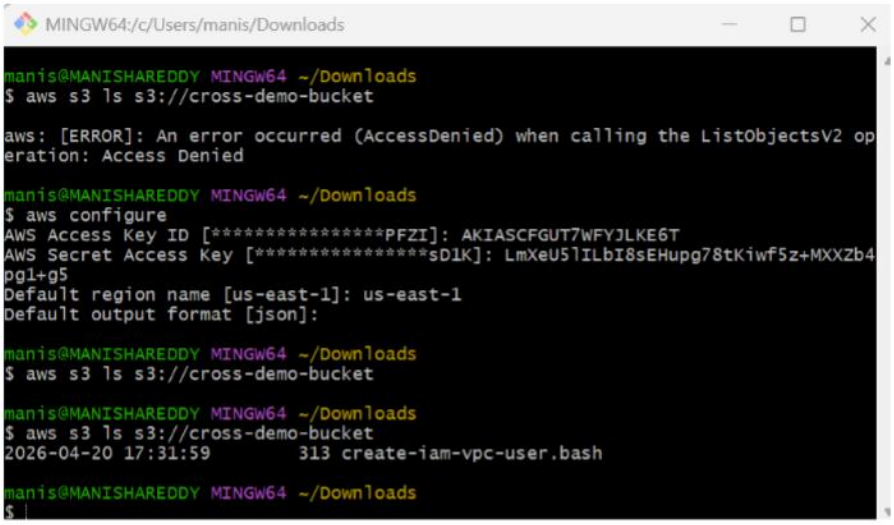


I have created a policy to access taha's account



I have attached the policy to user

Here I am accessing taha's bucket through AWSCLI



Creating bucket

Amazon S3 > Buckets > Create bucket
Block all public access
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.
Block public access to buckets and objects granted through new access control lists (ACLs)
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
Block public access to buckets and objects granted through any access control lists (ACLs)
S3 will ignore all ACLs that grant public access to buckets and objects.
Block public access to buckets and objects granted through new public bucket or access point policies
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.
Block public and cross-account access to buckets and objects through any public bucket or access point policies
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.
Turning off block all public access might result in this bucket and the objects within becoming public
AWS recommends that you turn on block all public access, unless public access is required for specific and verified use cases such as static website hosting.
I acknowledge that the current settings might result in this bucket and the objects within becoming public.
